

TABLE OF CONTENTS

TRANSLATOR'S FOREWORD.....	vii
----------------------------	-----

CHAPTER ONE

Pattern identification as a basis for determining treatment requires skilled mastery of the four examinations	1
Case 1: Concretion and conglomeration mounting pain (twisted ovarian cyst).....	1
Case 2: Cough and panting (chronic geriatric bronchitis, pulmonary emphysema, cardiopulmonary disease, and cardiac functional insufficiency [Level II–III])	7
Case 3: Dizziness and insomnia (low blood pressure)	10
Case 4: Lesser yáng (<i>shào yáng</i>) heat depression (fever of undetermined cause)	13
Case 5: Menstrual block with blood stasis engendering macules (subacute lupus erythematosus)	15
Empirical knowledge	18

CHAPTER TWO

Chinese medical theory is the solid foundation of pattern identification as the basis for determining treatment	27
Case 1: Enuresis during sleep	27
Case 2: Coughing blood (hemoptysis) (bronchiectasis)	31
Case 3: Inverted menstruation (cerebral arterio-venous deformity).....	35
Case 4: Urinary incontinence and toothache	43
Case 5: Bladder cough (cough with urinary incontinence)	46
Empirical knowledge	49

CHAPTER THREE

Using a treatment method according to the pattern is a vital link in treatment based on pattern identification	57
Case 1: Malaria (heat effusion or fever, etiology unknown)	57
Case 2: Convulsions (cerebral tumor?).....	64
Case 3: Wind strike (cerebral arterial thrombosis)	68
Case 4: A serious case of insomnia	72
Case 5: Insomnia and seminal emission	77
Empirical knowledge	80

CHAPTER FOUR

Flexible application of prescriptions and medicinals is important in treatment based on pattern identification	95
Case 1: Swelling in both rib-sides	95
Case 2: Liver-kidney qì stagnation, damp amassment in the urinary bladder (urinary calculi).....	100
Case 3: Vomiting and constipation (traumatic bone fracture sequelae).....	104

Case 4: Post-miscarriage placental retention (partial placental retention)	112
Case 5: Hair loss	116
Empirical knowledge	119
CHAPTER FIVE	
When treating diseases diagnosed by Western medicine, use pattern identification as a basis for determining treatment	129
Case 1: Hyperactive tongue wind (pediatric chorea)	129
Case 2: Chest impediment (acute myocarditis)	133
Case 3: Jaundice (acute infectious hepatitis)	139
Case 4: Summerheat warmth with dampness (epidemic encephalitis B)	142
Case 5: Head wind (Sheehan's syndrome)	147
Empirical knowledge	153
CHAPTER SIX	
A brief discussion on the Chinese medical statement, "Treating different diseases with the same method and treating same diseases with different methods."	167
Case 1: Abdominal Pain (Acute Gastritis)	167
Case 2: Stomach duct pain (acute gastritis)	169
Case 3: Greater yáng and yáng brightness combination disease (Salmonella infection)	173
Case 4: Wheezing and panting (asthma)	178
Case 5: Wheezing and panting (asthma)	181
Empirical knowledge	184
CHAPTER SEVEN	
Important issues when applying pattern identification to determine treatment	191
Case 1: Joint-deformity impediment (rheumatoid arthritis)	191
Case 2: Hemilateral headache (angio-neurotic headache)	197
Case 3: Intestinal welling-abscess (acute appendicitis)	200
Case 4: Latent damp-heat in the lesser yáng (<i>shào yáng</i>) (fever, etiology unknown) ...	204
Case 5: Hemilateral headache (cervical spondylosis))	208
Empirical knowledge	212
CHAPTER EIGHT	
Constantly improve and develop pattern identification skills to determine treatment ...	247
Case 1: Stone strangury (urinary calculus)	248
Case 2: Headache and heart palpitations (Level III atrioventricular block)	252
Case 3: Suspended rheum (exudative pleurisy)	261
Case 4: Chest impediment (coronary heart disease, angina pectoris)	263
Case 5: Dizziness and headache, soft tetany (renal and malignant hypertension)	269
Empirical knowledge	274
INDEX	281
